

Blessing Abumere

(410) 918-7155 | babumere04@gmail.com | [Portfolio](#)

EDUCATION

Towson University (No.1 Public University in Maryland WSJ 2025)

Expected Graduation: December 2026

B.S in Computer Science

Relevant Coursework: Software Engineering, Database Management Systems, Mobile Application Development, Web-Based Programming, Operating Systems

TECHNICAL SKILLS (Ordered by Most Proficient)

Languages: C#, Java, JavaScript/TypeScript, C++, Kotlin, Rust, Python

Frameworks/Libraries: .NET (ASP.NET, WinForms, WPF), React.js, Node.js, Jetpack Compose, Spring Boot,

Cloud/DevOps: Azure, Git, GitHub Actions (CI/CD), Docker

Databases: MySQL, SQLite, PostgreSQL, MongoDB

Tools: Visual Studio, VS Code, Android Studio, IntelliJ, SQL Server, Postman, Docker Desktop

PUBLIC PROJECTS AND COURSEWORK

[CVE Scout](#) | Kotlin, Jetpack Compose, Retrofit, Room, SQLite3

- Android security tool to aggregate and search Common Vulnerabilities and Exposures (CVE) using Jetpack Compose for a modern declarative UI.
- Implemented Retrofit for REST API consumption and Kotlin Coroutines for efficient, non-blocking data fetching.
- Integrated Room with SQLite3 to implement an offline-first architecture, allowing for high-performance searching and filtering of vulnerability data without active network dependencies.

[Library Management System](#) | Java, MySQL, JDBC

- Co-Architected a multi-tier Java application separating data access, business logic, and presentation layers, utilizing DTOs to ensure type-safe data transfer across modules.
- Implemented ACID-compliant transactions to orchestrate complex workflows preventing data inconsistency during concurrent failures.
- Designed and integrated SQL Views to offload complex aggregation logic to the database, optimizing application performance for analytical queries.
- Developed a robust API layer featuring dynamic SQL generation for reservations and Optional wrappers for null-safe member lookups, enhancing system reliability.

[Cross Platform Shell](#) | C++, Linux API, Win32 API, GitHub Actions

- Engineered a custom operating system shell in C++ capable of executing system commands in both Windows and Unix-based environments.

- Implemented core shell functionalities including process creation (forking/executing), I/O redirection, and signal handling to mimic production-level shell behavior.
- Designed a cross-platform compatibility layer to abstract system-specific API calls, ensuring consistent performance across different operating systems.

Roblox Sharp , C#, REST, GitHub Actions

- Developed an unofficial, asynchronous C# wrapper library for the Roblox Web API, simplifying HTTP requests for external developers.
- Utilized C# async/await patterns to handle non-blocking API calls, improving application responsiveness for end-users.
- Structured the library to be modular and extensible, allowing for easy integration into .NET applications and game management tools.

ADDITIONAL EXPERIENCE

System Administrator, NovaNest, Maryland

9/2025- Present

- Administered the corporate Google Workspace environment, overseeing cloud storage architecture, user provisioning, and security configurations for real estate operations.
- Enforced data governance policies using Role-Based Access Control making sure sensitive financial records were accessible only to authorized stakeholders.
- Structured centralized document repositories to streamline workflows for fix-and-flip projects, reducing file retrieval time and ensuring version control for critical contracts.
- Managed organizational security settings, implementing best practices for external sharing and data retention to protect intellectual property.

Gameplay Administrator & Internal Tools Developer, Football Fusion (Roblox Platform)

2/2022 – 5/2025

- Co-engineered an Alt Account Detection system to identify and flag ban evaders by analyzing account metadata (game activity, CPU time etc), deploying a custom solution months before Roblox's native platform-wide release.
- Automated the banning workflow by engineering a custom AutoHotkey script to execute batch enforcement actions, reducing manual administrative time by approximately 53% per player banned
- Developed an Internal Case Management System for fellow administrators using WPF (C#) to help add structure into reviewing Discord reports into a searchable database, organizing evidence review for a game with 1.5 billion+ lifetime sessions.

Cashier, Golden Corral, 7908 Rossville Boulevard, Baltimore, Maryland

6/2021-10/2023

- Demonstrated multitasking abilities by handling cash, credit card transactions, and gift card processing with speed and precision in a fast-paced environment.
- Collaborated with the team to restock buffet merchandise, organize displays, and keep and maintain a clean and organized checkout area abiding by buffet health standards.
- Resolved customer issues to enhance customer satisfaction.
- Trained new team members on Golden Corral POS systems.
